

DONNOVAN WINT JR.

QA AUTOMATION ENGINEER / SDET

Philadelphia, PA | 484-888-1308 | donnovanwint@gmail.com | donwint.com

PROFESSIONAL SUMMARY

QA automation engineer and software engineer with hands-on experience testing enterprise web applications, APIs, authentication flows, CMS platforms, and data integrations. Builds practical automation with Playwright, Selenium, Postman, and Newman and combines it with exploratory, cross-browser, accessibility, performance, and release testing. Brings a developer-level understanding of frontend, backend, databases, CI/CD, and production logs to defect isolation and quality planning.

CORE TECHNICAL SKILLS

AUTOMATION	Playwright, Selenium, Postman/Newman, JavaScript/TypeScript, API contract checks, reusable regression scenarios
TESTING	Functional, integration, end-to-end, regression, exploratory, cross-browser, responsive, accessibility, performance, smoke and release testing
SYSTEMS	React, Next.js, Vue.js, React Native, WordPress, PHP, Node.js, Java, REST, GraphQL, OAuth/OIDC, Auth0
DATA VALIDATION	PostgreSQL, MySQL, MongoDB, Redis, SQL checks, schema and payload validation, ETL verification
CI & OBSERVABILITY	GitHub Actions, release gates, Datadog, CloudWatch, structured logs, distributed traces, defect reproduction and incident support
PRACTICES	Test planning, risk-based coverage, acceptance criteria review, defect reporting, root-cause collaboration, runbooks and release checklists

PROFESSIONAL EXPERIENCE

NASCAR | Senior Software Engineer / Development Manager

May 2023 - Nov 2025

Owned quality planning and release validation for account, rewards, content, marketing, and API-driven experiences used across NASCAR digital products.

My Profile and Fan Rewards

- Created functional and regression coverage for registration, login, OIDC redirects, session state, profile updates, subscriptions, driver preferences, loyalty activity, and permission boundaries. Used browser automation, API validation, database checks, and production logging to isolate defects across systems.

API and Integration Testing

- Built Postman/Newman checks for REST endpoints and integration contracts used by WordPress, React, mobile, rewards, and Adobe services. Added repeatable release verification for payload shape, error behavior, authentication, and downstream data handling.

Web and Mobile Release Quality

- Used Playwright and Selenium alongside manual exploratory testing to verify responsive behavior, browser compatibility, accessibility, content rendering, and critical user journeys across WordPress, React, and React Native-connected experiences.

Observability and Incident Support

- Used Datadog, CloudWatch, structured logs, and traces to reproduce production issues and distinguish frontend, API, authentication, data, and third-party failures. Documented findings and converted recurring incidents into regression checks and runbooks.

Enterprise Web Regression

- Tested a WordPress and React/Next.js platform across browsers and viewport sizes, validating content APIs, component behavior, navigation, forms, and deployment changes.

API and Permission Validation

- Created integration test coverage for API behavior, request validation, permission boundaries, and data isolation within an enterprise financial-search environment.

Performance and LLM Feature Testing

- Investigated Core Web Vitals regressions and tested the ALFred LLM demonstration for request handling, response behavior, error states, and browser usability before customer-facing use.

Apr 2022 - Aug 2022**PriceWeber | Senior Software Engineer**

- Validated enterprise marketing sites across browsers, devices, and breakpoints and documented defects with reproducible steps, expected behavior, and implementation context.
- Performed accessibility, SEO, and performance audits and retested remediations before launch.
- Tested PHP, JavaScript, CMS, and API integrations using functional, data, and negative-path scenarios.

Jun 2019 - May 2022**Sagefrog Marketing Group | Software Engineer**

- Established launch checklists and repeatable validation practices for more than 30 WordPress and headless web projects.
- Tested custom themes, plugins, forms, REST integrations, analytics, CRM connections, and administrative workflows across staging and production environments.
- Reviewed requirements and designs early, identifying edge cases before implementation and helping developers reproduce and resolve defects.
- Mentored engineers on testability, browser debugging, accessibility, security basics, and quality ownership.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology | Penn State Abington, 2019**Certifications:** Responsive Web Design; Front-End Development Libraries (freeCodeCamp)
