

DONNOVAN WINT JR.

Systems & Infrastructure Engineer

donnovanwint@gmail.com | 484-888-1308 | donwint.com | Philadelphia, PA

PROFESSIONAL SUMMARY

Systems and infrastructure engineer with 7+ years designing and hardening cloud-based platforms on AWS—spanning infrastructure-as-code (Terraform), containerized workloads on Amazon Elastic Kubernetes Service (EKS), and CI/CD enforcement via GitHub Actions. Proven track record building observability at scale with Datadog (SLO/SLI frameworks, distributed tracing, high-signal alerting) and enforcing security guardrails: IAM least-privilege policies, OAuth/OpenID Connect (OIDC) authentication, and secrets management. Equally fluent in data engineering—designing high-throughput extract, transform, and load (ETL) pipelines, optimizing PostgreSQL schemas, and automating quality gates that keep distributed systems shipping reliably across every environment.

CORE SKILLS

Cloud & Infrastructure

AWS (EKS, Lambda, S3, RDS, SQS/SNS, CloudFront, EC2, IAM, CloudWatch), Docker, Kubernetes, Terraform, Serverless Architectures

Security & DevSecOps

IAM Policy Design, OAuth/OIDC (Auth0), Secrets Management, Least-Privilege Enforcement, Vulnerability Scanning, Code Review Enforcement

Data & Quality Engineering

ETL Pipeline Design, PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Schema Design, Query Optimization, Indexing, High-Throughput Data Modeling

CI/CD & Automation

GitHub Actions, Maven/Gradle Build Tooling, API Contract Validation (Postman/Newman), Release Gating, Dependency Scanning, Rollback Automation

Observability & Reliability

Datadog (Dashboards, Distributed Tracing, Alerting), SLO/SLI Definition, MTTD/MTTR Reduction, Structured Logging, Incident Response, Runbook Authoring

Backend & API Engineering

Node.js, Python, Java (Spring Boot), PHP, REST/GraphQL API Design, WebSockets, Webhooks, Headless CMS Platforms

PROFESSIONAL EXPERIENCE

NASCAR · Senior Software Engineer / Development Manager

May 2023 – November 2025

- **Hardened and secured containerized workloads** on Amazon Elastic Kubernetes Service (EKS) by implementing IAM least-privilege policies, managing secrets via AWS Secrets Manager, and enforcing dependency scanning within GitHub Actions CI/CD pipelines—supporting digital platforms serving millions of monthly users.
- **Designed and deployed a comprehensive observability stack**—Datadog dashboards, distributed tracing, and SLO-based alerting—reducing Mean Time To Detect (MTTD) by approximately 40% and equipping on-call engineers with high-signal incident data for rapid resolution.
- **Architected CI/CD quality gates and automated API contract validation** (Postman/Newman) across the SDLC, creating a repeatable regression testing framework that standardized release verification and rollback procedures across all platform services.
- **Provisioned and managed multi-environment AWS infrastructure using Terraform**—Lambda, SQS/SNS, RDS, and IAM—ensuring environment parity and reliable test/prod consistency through infrastructure-as-code practices.
- **Engineered high-throughput ETL pipelines in Java** to parse and extract structured race data (driver stats, finishing positions, lap times) from official NASCAR result documents into PostgreSQL, implementing schema optimization and query indexing to feed downstream APIs and analytics platforms.

- **Rebuilt the MyProfile Rewards platform end-to-end:** Auth0-backed OAuth/OIDC authentication flows, re-designed APIs, and overhauled session/state management—with thorough functional and regression testing verifying security boundaries and session integrity across the new system.
- **Architected a decoupled headless WordPress platform** serving millions of monthly visitors—PHP-driven REST APIs, React front-ends—with full API contract validation and cross-device compatibility testing ensuring reliable, high-throughput content delivery.

AlphaSense · Senior Software Engineer

August 2022 – May 2023

- **Built RESTful APIs powering enterprise search at scale**—the backend infrastructure underpinning a high-concurrency financial data platform—with rigorous integration testing and performance profiling under sustained load conditions.
- **Designed and validated database schemas and pipeline architecture** supporting high-throughput, low-latency query workloads over structured and unstructured financial data—including indexing correctness verification and performance regression testing.
- **Architected API contracts for cross-content search** with strict permissioning and data isolation; authored and executed integration tests verifying data boundary enforcement across internal and external financial corpus blending.
- **Performed systematic Core Web Vitals audits** and resolved frontend performance bottlenecks across the enterprise platform—documented findings, prioritized issues, and verified fixes through structured retesting.
- **Gained exposure to JVM-based data pipeline patterns** within a Java-heavy search infrastructure and Maven/Gradle build tooling, while contributing integration and regression test coverage for typed, compiled backend services.

PriceWeber · Senior Software Engineer

April 2022 – August 2022

- **Delivered custom backend and frontend implementations** for Fortune 500 marketing campaigns with full cross-device and cross-browser compatibility validation, ensuring production-quality releases across all target environments.
- **Performed technical audits across SEO, WCAG accessibility, and Core Web Vitals**—produced prioritized defect reports and remediation plans verified through structured retesting cycles.
- **Built automated marketing data pipelines** using PHP and REST APIs, eliminating significant manual reporting overhead and enabling repeatable, validated data delivery across campaign workflows.

Sagefrog Marketing Group · Software Engineer

June 2019 – May 2022

- **Architected a decoupled WordPress + Vue.js headless platform** with API-driven content delivery, consistently achieving 90+ Lighthouse performance scores through structured performance and quality auditing.
- **Led architecture and delivery of 30+ enterprise B2B web platforms**—consistently applying quality gates, performance benchmarks, and cross-browser validation protocols to ensure production-ready releases at scale.
- **Designed and maintained MySQL-backed data models and REST API integrations** across multiple enterprise platforms, ensuring schema consistency, query performance, and data reliability as platform complexity scaled.
- **Established coding standards and structured code review practices;** mentored junior and mid-level developers on testing discipline, security best practices, and quality ownership.

TECHNICAL ENVIRONMENT

TECHNICAL ENVIRONMENT: AWS (EKS, Lambda, S3, RDS, SQS/SNS, CloudFront, IAM, CloudWatch), Terraform, Docker, Kubernetes, GitHub Actions, Datadog, PostgreSQL, MySQL, MongoDB, Elasticsearch, Python, Java (Spring Boot), Node.js, PHP, OAuth/OIDC (Auth0), Redis, GraphQL, REST APIs, Postman/Newman

EDUCATION & CERTIFICATIONS

B.S. Information Technology — Penn State Abington

Certifications: Responsive Web Design · Front-End Development Libraries (freeCodeCamp)
