

DONNOVAN WINT JR.

Senior Software Engineer — Cloud Platforms · AWS · Kubernetes · Backend Systems

Philadelphia, PA · donnovanwint@gmail.com · 484-888-1308 · donwint.com

PROFESSIONAL SUMMARY

Senior software engineer with 7+ years building and operating cloud-native platforms on AWS — Kubernetes (EKS) workloads, multi-region serverless event pipelines, Terraform-managed infrastructure, and sub-200ms APIs at scale. Track record building the platform services and observability infrastructure that engineering teams depend on, including supporting AI and analytics teams at NASCAR and AlphaSense with the backend, data, and deployment infrastructure underpinning their products. Comfortable across DevSecOps tooling, CI/CD, container orchestration, and platform engineering best practices.

CORE SKILLS

Cloud & Infrastructure: AWS (EKS, Lambda, S3, CloudFront, SQS/SNS, RDS, EC2, ECS, IAM, CloudWatch), Kubernetes, Docker, Terraform (multi-region IaC), CI/CD (GitHub Actions), microservices

Platform Engineering & Observability: Datadog (dashboards, alerting, distributed tracing), structured logging, SLO/SLI definition, incident response, runbook authoring, deployment pipelines, API versioning standards

Backend & APIs: Node.js, Python, Ruby, PHP (OOP, PSR), RESTful & GraphQL API design, WebSockets, webhooks, serverless architectures, FastAPI-style service patterns

Data: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch — schema design, query optimization, indexing, ETL pipelines, high-throughput data modeling

Security & DevSecOps: IAM policy design, secrets management, auth flows (OAuth/OIDC, Auth0), least-privilege deployment patterns, dependency scanning, code review enforcement

Applied AI & LLM Support: Production RAG pipelines, vector search, LLM API integration (OpenAI, Anthropic, domain-trained models), backend infrastructure for AI/ML workloads

Frontend: React, Next.js, Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind

PROFESSIONAL EXPERIENCE

NASCAR · Senior Software Engineer / Development Manager

May 2023 – November 2025

- Built and operated production Kubernetes (Amazon EKS) workloads supporting NASCAR's digital platforms — cluster configuration, deployment manifests, autoscaling, and rolling release strategies serving millions of monthly users.
- Provisioned AWS infrastructure with Terraform across multiple environments — VPC networking, EKS clusters, Lambda functions, SQS/SNS, RDS, and IAM policies — standardizing infrastructure-as-code patterns across the web platform.
- Established Datadog-based observability across services — dashboards, alerting, distributed tracing, and SLO tracking — significantly reducing mean time to detection and giving on-call engineers actionable signal during incidents.
- Designed and deployed serverless AWS Lambda functions and SQS-backed event pipelines automating content ingestion and processing, improving system reliability and eliminating significant manual operational overhead.
- Architected and led development of a headless WordPress platform serving millions of monthly visitors — PHP-driven REST APIs, React front-ends, and high-throughput content delivery across multiple brand properties.
- Established and enforced engineering standards across the web team — code review practices, API versioning conventions, GitHub Actions CI/CD pipelines, deployment automation — improving release cadence and reducing production incidents.
- Built backend data infrastructure and APIs supporting NASCAR's internal AI initiatives — race-quality analytics and playoff format simulation tools — providing the data pipelines, query layers, and deployment infrastructure that AI/ML engineers built on top of.
- Integrated Adobe Journey Optimizer with the headless CMS to power real-time data feeds for email marketing automation, accelerating campaign delivery cycles.
- Rebuilt the MyProfile Rewards platform end-to-end: new Auth0-backed registration and authentication flows, redesigned dashboard and points-tracking APIs, and overhauled session/state management.

- Partnered with product, design, security, and data teams to translate engagement analytics requirements into scalable backend architecture and data model decisions.

AlphaSense · Senior Software Engineer

Aug 2022 – May 2023

- Built RESTful APIs powering enterprise search at scale, delivering consistent sub-200ms response times against tens of thousands of daily queries — the backend infrastructure underpinning AlphaSense Assistant's production RAG system over millions of business documents.
- Designed database schemas and backend pipeline architecture supporting high-throughput, low-latency query workloads against the platform's knowledge graph over structured and unstructured financial data — the indexing and embedding infrastructure underpinning the product.
- Architected API contracts and pipeline architecture for cross-content search blending customers' internal content with AlphaSense's external corpus under strict permissioning and data isolation requirements.
- Contributed to LLM-powered features (document summarization, guidance change detection, sentiment shift analysis) — focusing on the API surface, data pipelines, and integration with domain-trained models — contributing to measurable lifts in user engagement.
- Engineered and tuned React frontend interfaces; ran systematic Core Web Vitals audits and resolved performance bottlenecks across the enterprise platform.

PriceWeber · Senior Software Engineer

Apr 2022 – Aug 2022

- Delivered custom backend solutions and pixel-perfect frontend implementations for Fortune 500 marketing campaigns, with full cross-device compatibility.
- Built automated marketing data pipelines using PHP and REST APIs, eliminating significant manual reporting overhead.
- Performed technical audits across SEO, WCAG accessibility, and Core Web Vitals, producing prioritized remediation plans.

Sagefrog Marketing Group · Software Engineer

Jun 2019 – May 2022

- Architected a decoupled WordPress + Vue.js headless platform that significantly reduced page load times and enabled flexible, API-driven content delivery at scale.
- Led architecture and delivery of 30+ enterprise B2B web platforms — custom backends, bespoke plugins, ACF-driven content systems — consistently achieving 90+ Lighthouse performance scores.
- Developed automated PHP/REST API pipelines for marketing analytics and reporting.
- Mentored junior and mid-level developers; established coding standards and structured code review practices.

EDUCATION & CERTIFICATIONS

B.S. Information Technology — Penn State Abington

Certifications: Responsive Web Design · Front-End Development Libraries (freeCodeCamp)
