

DONNOVAN WINT JR.

BACKEND SOFTWARE ENGINEER

Philadelphia, PA | 484-888-1308 | donnovanwint@gmail.com | donwint.com

PROFESSIONAL SUMMARY

Backend software engineer with 7+ years designing APIs, content platforms, integrations, authentication flows, and data-processing services for enterprise web products. Experienced with PHP, Node.js, Java, Python, PostgreSQL, MySQL, REST, GraphQL, and AWS-supported applications. Known for translating product and operational requirements into maintainable services, clear data contracts, reliable integrations, and production-ready systems.

CORE TECHNICAL SKILLS

LANGUAGES	PHP, Node.js/JavaScript, TypeScript, Java, Python, SQL
APIS & SERVICES	REST, GraphQL, webhooks, API contract design, OAuth/OIDC, Auth0, session management, headless CMS services
DATA	PostgreSQL, MySQL, MongoDB, Redis, schema design, indexing, query optimization, ETL and structured-data pipelines
PLATFORMS	WordPress application development, headless WordPress, Drupal, Adobe Experience Platform, Adobe Journey Optimizer, HubSpot integrations
CLOUD & DELIVERY	AWS Lambda, S3, RDS, SQS/SNS, CloudFront, CloudWatch, IAM, GitHub Actions, Datadog
TESTING	Postman/Newman, Playwright, Selenium, integration testing, regression testing, release validation, structured logging

PROFESSIONAL EXPERIENCE

Freelance | Independent Software Engineer & Consultant

Nov 2025 - Present

Partner with clients as a senior backend engineer, delivering APIs, integrations, and content platforms end to end — from architecture and data contracts through build, launch, and handoff.

API & Performance Audits

- Audit production APIs, database queries, caching, and Core Web Vitals for bottlenecks, then implement fixes that improve reliability, throughput, and response times.

Migrations & Rebrands

- Lead WordPress and Drupal migrations and rebrands — re-modeling content, rebuilding REST endpoints, and preserving data integrity and SEO while minimizing downtime.

Greenfield Platforms

- Architect and build platforms from scratch with a headless CMS backing a React/Next.js frontend, designing the content models, APIs, and third-party integrations clients own going forward.

NASCAR | Senior Software Engineer / Development Manager

May 2023 - Nov 2025

Designed and supported backend services, integrations, and shared content systems used by NASCAR web, mobile, marketing, and loyalty products.

Profile, Rewards, and Authentication Services

- Rebuilt API and session flows for NASCAR My Profile and Fan Rewards, integrating Auth0/OIDC authentication, loyalty data, preferences, subscriptions, and account-state rules. Documented contracts and tested boundary conditions across login, registration, profile updates, and rewards activity.

Race Data and Marketing Pipelines

- Developed Java and API-based processing workflows that transformed structured race results, driver statistics, schedules, and media data for PostgreSQL-backed services, downstream APIs, and Adobe Journey Optimizer campaigns.

Shared WordPress Content APIs

- Designed and maintained PHP REST endpoints and content models that served traditional WordPress sites, React frontends, and React Native mobile clients. Addressed caching, permissions, validation, and backward compatibility as consumers evolved.

AWS Operations and Observability

- Supported production applications using CloudFront, S3, Lambda, RDS, IAM, CloudWatch, and Datadog. Investigated logs and traces, improved alert context, and created runbooks for recurring integration and release issues.

AlphaSense | Senior Software Engineer

Aug 2022 - May 2023

Enterprise Search Integrations

- Built and maintained REST integrations for an enterprise financial-search platform, with attention to request validation, permissions, data isolation, caching, and predictable error handling.

ALFred LLM Integration

- Connected an LLM-based interface to product APIs for a customer demonstration, implementing the server-side request flow, prompt and response handling, and a lightweight application layer for controlled product access.

Content Platform APIs

- Supported a WordPress CMS and React/Next.js frontend architecture by improving content endpoints, reducing plugin coupling, and validating integration behavior under normal and failure conditions.

PriceWeber | Senior Software Engineer

Apr 2022 - Aug 2022

- Developed PHP and Python integrations that moved campaign and reporting data between client systems, CMS platforms, and external APIs.
- Designed backend functionality for custom WordPress applications, including content models, administrative workflows, validation, and data access.
- Worked with frontend and client teams to define interfaces, troubleshoot production defects, and deliver releases with clear rollback and verification steps.

Sagefrog Marketing Group | Software Engineer

Jun 2019 - May 2022

- Built custom WordPress plugins, themes, REST integrations, and MySQL-backed functionality for more than 30 B2B web platforms.
- Architected the headless WordPress backend for John Vena Inc., creating structured content models and REST endpoints consumed by a Vue.js application.
- Integrated CRM, marketing, analytics, and third-party services while handling authentication, field mapping, validation, failure recovery, and administrative usability.
- Reviewed architecture and code, mentored developers, and established implementation patterns that reduced one-off solutions across client projects.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology | Penn State Abington, 2019

Certifications: Responsive Web Design; Front-End Development Libraries (freeCodeCamp)
