

DONNOVAN WINT JR.

Software Engineer · Backend Systems · Applied AI & LLM Platforms · Quality Engineering
Philadelphia, PA · donnovanwint@gmail.com · 484-888-1308 · donwint.com

PROFESSIONAL SUMMARY

Software engineer with 7+ years building backend systems and cloud-based platforms on AWS, with hands-on exposure to containerized services, serverless pipelines, and infrastructure-as-code workflows. Deep experience writing and enforcing quality across the full SDLC: API contract validation, integration and regression testing, structured observability, incident detection, and CI/CD pipeline enforcement. Comfortable contributing to platform reliability efforts, supporting QA processes, and helping shape the test strategy that keeps engineering teams shipping with confidence. Recent focus includes applied AI / LLM-powered features and the backend infrastructure that supports them.

CORE SKILLS

Cloud & Infrastructure: AWS (Lambda, S3, CloudFront, SQS/SNS, RDS, EC2, IAM, CloudWatch), Docker, exposure to Kubernetes and Terraform-managed infrastructure, GitHub Actions CI/CD

Quality Assurance & Testing: Test plan authoring, integration testing, functional & regression testing, UAT coordination, API contract validation (Postman/Newman), defect tracking & lifecycle management, SDLC quality gates, QA process implementation

Observability & Incident Quality: Datadog (dashboards, alerting, distributed tracing), SLO/SLI definition, structured logging, MTTD/MTTR reduction, runbook authoring, on-call incident response

Backend & APIs: Node.js, Python, Ruby, PHP (OOP, PSR), RESTful & GraphQL API design, WebSockets, webhooks, serverless architectures, FastAPI-style service patterns

Data & SQL: PostgreSQL, MySQL, MongoDB, Redis, ElasticSearch — schema design, query optimization, indexing, ETL pipelines, high-throughput data modeling

Security & DevSecOps: IAM policy design, secrets management, auth flows (OAuth/OIDC, Auth0), least-privilege patterns, dependency scanning, code review enforcement

Applied AI & LLM: Production RAG pipelines, vector search, LLM API integration (OpenAI, Anthropic, domain-trained models), backend infrastructure for AI/ML workloads

Frontend: React, Next.js, Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind — Core Web Vitals auditing & remediation

PROFESSIONAL EXPERIENCE

NASCAR · Senior Software Engineer / Development Manager *May 2023 – November 2025*

- Supported operation of containerized workloads on Kubernetes (Amazon EKS) for NASCAR's digital platforms, assisting with deployment manifests and release processes for services serving millions of monthly users.
- Established Datadog-based observability across services — dashboards, alerting, distributed tracing, and SLO tracking — significantly reducing MTTD and providing on-call engineers with actionable, high-signal incident data.
- Designed and enforced engineering quality standards across the web team — code review practices, API versioning conventions, GitHub Actions CI/CD pipelines — creating a repeatable QA gate before every production release.
- Authored runbooks and deployment checklists that standardized release verification, regression checkpoints, and rollback procedures across all platform services.
- Contributed to Terraform-managed AWS infrastructure across multiple environments — Lambda functions, SQS/SNS, RDS, and IAM policies — supporting infrastructure-as-code practices and environment parity for reliable test/prod consistency.
- Designed and deployed serverless AWS Lambda functions and SQS-backed event pipelines automating content ingestion and processing, improving system reliability and eliminating significant manual operational overhead.
- Architected a headless WordPress platform serving millions of monthly visitors — PHP-driven REST APIs, React front-ends, and high-throughput content delivery — including full API contract definition and cross-browser/cross-device compatibility validation.
- Built backend data infrastructure and APIs supporting NASCAR's internal AI initiatives — race analytics and playoff simulation tools — including data pipeline validation and query correctness testing.
- Rebuilt the MyProfile Rewards platform end-to-end: Auth0-backed authentication flows, redesigned APIs, and overhauled session/state management — with thorough functional and regression testing across the new system.

- Integrated Adobe Journey Optimizer with the headless CMS for real-time marketing automation data feeds; validated data pipeline correctness and delivery reliability end-to-end.

AlphaSense · Senior Software Engineer

Aug 2022 – May 2023

- Built RESTful APIs powering enterprise search at scale — the backend infrastructure underpinning AlphaSense Assistant's production RAG system.
- Designed and validated database schemas and pipeline architecture supporting high-throughput, low-latency query workloads over structured and unstructured financial data — including indexing correctness verification and performance regression testing.
- Architected API contracts for cross-content search blending customers' internal content with AlphaSense's external corpus under strict permissioning and data isolation requirements; authored and executed integration tests verifying data boundary enforcement.
- Contributed to LLM-powered features (document summarization, guidance change detection, sentiment shift analysis) — focusing on API surface, data pipeline validation, and integration testing against domain-trained models.
- Performed systematic Core Web Vitals audits and resolved frontend performance bottlenecks across the enterprise platform — documented findings, prioritized issues, and verified fixes through structured retesting.

PriceWeber · Senior Software Engineer

Apr 2022 – Aug 2022

- Delivered custom backend and frontend implementations for Fortune 500 marketing campaigns with full cross-device and cross-browser compatibility validation.
- Performed technical audits across SEO, WCAG accessibility, and Core Web Vitals — produced prioritized defect reports and remediation plans.
- Built automated marketing data pipelines using PHP and REST APIs, eliminating significant manual reporting overhead.

Sagefrog Marketing Group · Software Engineer

Jun 2019 – May 2022

- Architected a decoupled WordPress + Vue.js headless platform that significantly reduced page load times and enabled API-driven content delivery at scale.
- Led architecture and delivery of 30+ enterprise B2B web platforms — consistently achieving 90+ Lighthouse performance scores through structured performance and quality auditing.
- Established coding standards and structured code review practices; mentored junior and mid-level developers on testing discipline and quality ownership.

EDUCATION & CERTIFICATIONS

B.S. Information Technology — Penn State Abington

Certifications: Responsive Web Design · Front-End Development Libraries (freeCodeCamp)
