

DONNOVAN WINT

DEVELOPMENT MANAGER | SENIOR SOFTWARE ENGINEER | FULL-STACK, HEADLESS CMS, AWS

Philadelphia, PA (Open to Remote) | donnovanwint@gmail.com | 215-810-4852 | donwint.com | linkedin.com/in/donnovan-wint-jr/

SUMMARY

Development manager and senior software engineer with 7+ years building web platforms for high-traffic brands, from B2B agencies to NASCAR. Just as comfortable writing code as coaching the engineers who ship it; most recently led a team of 5 engineers behind a platform serving millions of fans each month. Now consulting independently on platform architecture and delivery, and open to engineering management and senior engineering roles.

SKILLS

Engineering leadership: Team management, hiring, coaching and 1:1s, Scrum, Jira, sprint planning, code review, release management, incident escalation, vendor coordination, AI-assisted development

Languages: PHP (OOP, PSR), JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3, Sass

Front end: React, Next.js, Vue.js, Nuxt.js, React Native, responsive UI

Back end and APIs: Node.js, REST, GraphQL, WebSockets, webhooks, OAuth/OIDC, Auth0, event-driven services

CMS and platforms: WordPress (headless, ACF, Gutenberg, WooCommerce), Drupal, HubSpot CMS, Adobe Experience Platform, Adobe Journey Optimizer

Data: PostgreSQL, MySQL, MongoDB, Redis, schema design, query optimization, reporting integrations

Cloud and DevOps: AWS (Lambda, SQS, S3, CloudFront, RDS, EC2, IAM), Docker, GitHub Actions, Terraform, CI/CD

Testing and observability: Playwright, Selenium, Postman/Newman, Datadog, release validation, production troubleshooting

Search and performance: Technical SEO, structured data, AI-search readiness, Core Web Vitals, Lighthouse, WCAG accessibility

Consulting: Discovery, requirements analysis, solution architecture, technical audits, stakeholder communication, documentation

EXPERIENCE

NASCAR | Development Manager (Senior Software Engineer)

05/2023 – 11/2025

TEAM LEADERSHIP

- Managed a team of 5 engineers, running weekly Scrum, weekly 1:1s, bi-weekly code-review sessions, and Jira sprint planning.
- Coached engineers to raise questions early and break down unfamiliar tickets; weekly Jira completions rose and stalled work moved forward.
- Acted as hiring manager for engineering roles, running interviews and making hiring decisions.
- Reviewed pull requests and approved or blocked changes based on code quality, architecture, testing, and launch readiness; fewer bugs reached production.
- Introduced AI code review in GitHub Actions ahead of manual review, and set code-review, API-versioning, documentation, and deployment standards.
- Covered weekend race-monitoring shifts in the team rotation and served as on-call escalation on weekends other engineers monitored.
- Coordinated with vendor Gigya on Fan Rewards data requirements, integration, and issue resolution.

PLATFORM ARCHITECTURE AND DELIVERY

- Architected a headless WordPress platform serving millions of monthly visitors, with PHP REST APIs, React front ends, and high-throughput content delivery.
- Built AWS Lambda functions and SQS-backed pipelines that automated content ingestion, reducing recurring manual processing work by approximately 30%.
- Integrated Adobe Journey Optimizer with the headless CMS through reusable data feeds, shortening campaign assembly time by approximately 25%.
- Rebuilt MyProfile Rewards registration, Auth0/OIDC authentication, points-tracking APIs, and session management across WordPress, React, and PHP.
- Designed back-end architecture and data models from attendance and engagement analytics requirements across product, marketing, mobile, and data teams.

Freelance | Independent Software Engineering Consultant

11/2025 – Present

- Lead discovery, solution architecture, delivery planning, launch, and handoff for healthcare, finance, and e-commerce web platforms.
- Advise stakeholders on platform tradeoffs, risks, and priorities, turning business goals into maintainable technical plans.
- Design relational schemas and REST APIs connecting client sites to CRM, marketing, and reporting systems, reducing recurring administrative work by approximately 30%.
- Run technical SEO, AI-search, Core Web Vitals, and WCAG audits, then implement prioritized fixes that raise Lighthouse scores.
- Host and optimize applications on AWS S3, CloudFront, and EC2, using CDN caching to cut page delivery time by approximately 25%.

AlphaSense | Senior Software Engineer

08/2022 – 05/2023

- Owned the company website end to end as its sole engineer, approving every change and leading delivery of the site rebrand.
- Built and demonstrated Alphred, AlphaSense's AI representative, connecting an LLM-driven interface to product APIs for prospective-customer presentations.
- Rebuilt shared content components in React, Next.js, and headless WordPress, reducing plugin dependence and improving publishing-workflow efficiency by approximately 20%.
- Built and tested REST integrations, resolved Core Web Vitals issues, and validated responsive behavior, accessibility, and releases across environments.

PriceWeber | Senior Software Engineer (Contract)

04/2022 – 08/2022

- Delivered WordPress, PHP, and JavaScript builds for Fortune 500 marketing programs, connecting responsive components to CMS content and external APIs.
- Automated marketing analytics, reporting, and campaign-data integrations with PHP REST APIs, reducing recurring manual operations by approximately 30%.
- Ran cross-browser, WCAG, SEO, and Core Web Vitals audits, turning findings into prioritized engineering work before release.

Sagefrog Marketing Group | Software Engineer

06/2019 – 05/2022

- Mentored 2 junior developers in coding standards, testing, and code review, bringing both to production-ready code within months; also served as hiring manager for engineering roles.
- Built and maintained 30+ B2B websites with custom WordPress themes, plugins, PHP, JavaScript, MySQL, and third-party integrations.
- Architected a headless WordPress and Vue.js platform for John Vena Inc., improving page-load time by approximately 30% through API-driven delivery.
- Created reusable development patterns and launch checklists for accessibility, SEO, performance, regression testing, and production readiness.
- Partnered with design, strategy, and client teams to turn business requirements into delivery plans.

SELECTED PROJECTS

- **AI Search Readiness Audit:** Audit framework covering crawlability, structured data, Core Web Vitals, accessibility, and answer-engine visibility, ending in a prioritized remediation plan.
- **End-to-End Testing and Accessibility Suite:** Playwright, Selenium, and Postman/Newman tests with WCAG checks and Datadog monitoring for critical user flows.
- **John Vena Inc. Headless Platform:** WordPress content models and REST endpoints powering a Vue.js and Nuxt.js customer-facing application.

EDUCATION AND CERTIFICATIONS

Bachelor of Science in Information Technology | Penn State Abington

2019

Certifications: Responsive Web Design; Front-End Development Libraries | freeCodeCamp
